

DETOUR GOLD – ZONE 58N CANADA

OreVision® saw Zones 75 & 58N through a thick layer (10-30 m) of conductive overburden

An OreVision test-survey was completed to evaluate the potential of this IP technique to discover mineralization similar to Zones 58N & 75, previously discovered by geology. The 3D inversion of the OreVision test-survey successfully delineated 2 chargeable bodies consistent with the known mineralization.

Drilling results:

	Au g/t	Length (m)	Zone
DLD-14-103 (left)	11.39	2.7	58
	2.93	34.3	58N
DLD-16-216 (middle)	4.47	10	58N
	7.13	5	58N
DLD-16-222 (right)	7.02	8.4	75
	4.09	13	58N
	5.55	23	58N

Detour Gold Corporation is a Canadian intermediate gold producer and operate the Detour Lake mine in the jurisdiction of northern Ontario. Zone 58N is located to the south-east of Detour Lake Mine.
