

# NORTH CABER

CANADA

InfiniTEM® en surface a aisément détecté une lentille VMS en Cu-Zn fortement penté, situé à 300m de profondeur, et sous un mort-terrain conducteur. Sous ces conditions, un levé EM conventionnel aurait atteint ses limites.

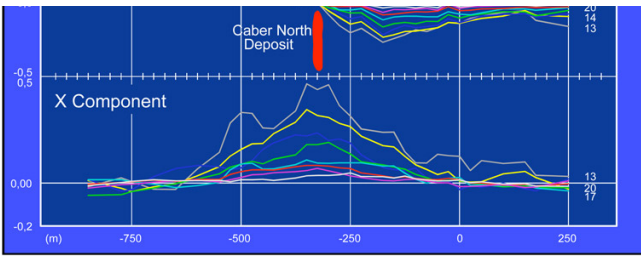

The Caber North deposit (1.3 Mt @ 4.0 % Zn, 1.7% Cu) is buried at > 300 metres depth, under conductive overburden.

A conventional EM survey barely detects the deposit. Detection depends strongly on the loop location relative to the deposit.

InfiniTEM® successfully detects the deposit, regardless of the loop

location.
