

HINOBAAN

PHILIPPINES

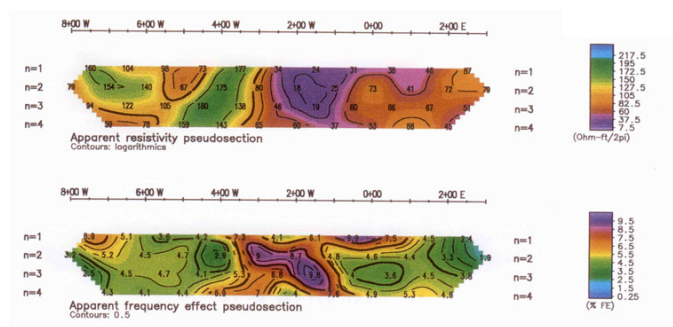

IP is an effective tool for porphyry copper exploration and delineation.
Image2D™ makes DDH planning easy.

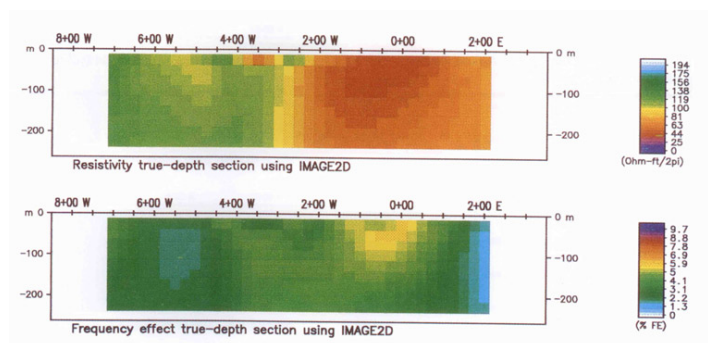

Hinobaan (97 Mt @ 0.5 % Cu) is a porphyry copper sub-horizontal deposit located in the Philippines.

An induced polarization survey was conducted to verify the deposit extension.

The pseudosections confirm the mineralization, but where to drill?

Conversion of the IP data with Abitibi Geophysics Image 2D™ proprietary software localizes the deposit and shows that it has limited depth .
